HTML 3.2 Compliance in WebMaker 3.0

This document addresses the issue of where we need to add attributes or make other changes to WebMaker and WML in order to be conformant with HTML 3.2. The information is presented as a list of elements, next to which is a list of possible attributes (and their values if the set is restricted). This information has been separately submitted as a series of email bug reports to webmaker-bugs.

In the table below, the *Impl Status* column indicates how the element is implemented in WebMaker:

NO	Not implemented
FOUNDATION	Inner code exists, but no external interface
AUTO	Automatic generation is the only way to get this element
WML	User control via WML
YES	Automatic generation as appropriate and WML rule
RESERVED	Keyword reserved by W3C for future use
DEPRECATED	Keyword deprecated by W3C

Element Name	WM Bug #	Attr Name	Attr Values	Impl Status
A	–			YES
		NAME		AUTO
